### Reflection to lecture

In November 13, I went lecture about environment, and it was held in lecture hall, and about 30 – 40 students were there. The content is about how we can make sustainable environment. The presenter taught us climate is one of the most serious problems for our earth, and she showed some present situation about them. Also, she said small power will save us in the future. However, I felt this lecture was a little difficult for me because professor spoke very fast and almost vocabulary was hard to figure out. That is why I understood the lecture about only 30 percent. It was hard to understand, but it told me that I have to study more and more, and it was good opportunity for me.
